Solve phase "a" independent of the other phases Total system power  $S = 3 V_a I_a^*$  If desired, phase "b" and "c" values can be determined by inspection (i.e.,  $\pm 120^\circ$  degree phase shifts) If necessary, go back to original circuit to determine line-line values or internal values. EE369 POWER SYSTEM ANALYSIS Energy and power system tools are applied to model the impacts of increasing shares of variable generation at various levels of detail. Long-term energy system models analyze the evolution of the energy system over several decades and include nonelectricity sectors, such as heat or transportation. The investment decisions and policy recommendations derived from such models may serve as input ... Energy System
