A manufacturing process produces, on the average, 3% defective items.

The company ships 12 items in each box and wishes to guarantee no more than one defective item per box. What is the probability that the box will fail to satisfy the guarantee?

Geometric Distribution Worksheets - Teacher Worksheets Binomial random variable Binomial random variable is a specific type of discrete random variable. It counts how often a particular event occurs in a fixed number of trials. For variable to be binomial it has to satisfy following conditions: We have a fixed number of trials; On each trial, the event of interest either occurs or does not occur. Distributions Ch 8.1 - The Binomial Distributions . The Binomial Setting

A situation where these four conditions are satisfied is called a binomial setting. 1. Each observation falls into one of just two categories, which we call "success" or "failure". 2. AP Statistics - Ch 8 - The Binomial and Geometric ... The binomial distribution describes the probability of having exactly k successes in n independent Bernoulli trials with probability of success p . Kiddy Math Definition 1: Under the same assumptions as for the binomial distribution, from a population of size m of which k are successes, a sample of size n is drawn. Let x be a random variable whose value is the number of successes in the sample. The probability density function (pdf) for x , called the hypergeometric distribution, is given by.

Observations: Let $p = k/m$.
